

National Survey of Sexual Attitudes and Lifestyles 2010-2012 ('Natsal-3') – Note for users of web data

This note gives brief guidance on the use of the Natsal-3 web survey dataset. Full details of the methodology of Natsal-3, including sampling, data collection, biological samples, response, data preparation and weighting can be found on the Natsal website:

<http://natsal.ac.uk/natsal-3.aspx>

The web follow-up is described in the following journal article:

Burkill S, Copas A, Couper MP, Clifton S, Prah P, Datta J, Conrad F, Wellings K, Johnson AM, Erens B. Using the web to collect data on sensitive behaviours: a study looking at mode effects on the British National Survey of Sexual Attitudes and Lifestyles. PLoS ONE 11(2): e0147983.doi:10.1371/journal.pone.0147983

An annotated version of the web questionnaire is archived with this dataset; this explains the relationship between the variables in this and the main survey dataset. The Natsal-3 codebook, archived with the Natsal-3 dataset (SN7799), contains a full description of those variables. The web data and the main Natsal datasets can be combined using the serial number SIN2. The web data have not been weighted.

Note that some Natsal-3 variables are not included in either archived data set for reasons of confidentiality.
